

Staying connected is vital for your home office

Stay online and stay productive in your home office for Certainty in a Connected World

Today, losing power means disruption from the internet, business meetings, data processing and can even restrict us from contacting friends and family during emergencies.

In a world where working from home is becoming popular or even essential, having reliable internet and backup power is vital to ensure you can stay productive.

APC™ by Schneider Electric offers our Back-UPS™ families to stay connected while boosting your home office efficiency.

What's a UPS?

An uninterruptible power supply (UPS) provides surge protection and a continuous source of power to your devices to guarantee that your network and attached equipment will remain protected, available and powered. A surge protector provides a defense against electrical surges while a UPS offers battery backup, voltage fluctuations and surge protection all combined into a single product.

When to use a surge protector or UPS?

Surge Protector

- Telephone
- Digital clocks
- Lamps
- Paper Shredder
- Printer
- Scanner
- Air Purifiers

Either:

- Cable box
- Laptop
